WOOD'S CROP SPECIAL

Giving Timely Information and Prices of Seasonable Seeds

PUBLISHED BY T.W. WOOD & SONS SEEDSMEN RICHMOND VA.

VOL. XXV.

APRIL EDITION

1930

Reproduction of Paragraph Appearing in The Virginia Department of Agriculture Bulletin No. 267. March, 1930

TO PURCHASERS OF FIELD SEEDS:

Your attention is directed to Table appearing on Page 14 of this Bulletin showing

"THE STANDING OF SEEDSMEN FOR THE YEAR 1929"

This rating is based upon the percentage of lots sampled by inspectors which were found to be correctly and completely tagged as is required by law.

Farmers will do well to study this table and similar ones published from year to year with the idea of determining the best sources of seed supply.

Facts Tell the Truth About Seeds

For over fifty years WOOD'S SEEDS have maintained the leadership in quality and dependability. The high standing of WOOD'S SEEDS, shown in the official tabulations of seed dealers made by the Virginia Department of Agriculture (see next column), is the best evidence of our careful selection and handling of seeds.

Both the U. S. Government and State Agricultural Departments are urging the use of better quality seeds, as they fully realize it is the fundamental basis of better and larger yielding crops. WOOD'S SEEDS are sold at the lowest possible prices, consistent with quality, and are offered with confidence to our customers as the most reliable and dependable seeds obtainable.

WOOD'S SEEDS

A Three Year Record

1927

137 samples of Wood's Seeds tested, of which 95% averaged well over the requirements of the Virginia standard. With the exception of four out of State dealers, each of which had less than 12 samples tested, Wood's Seeds were at the top in quality over all other dealers.

1928

The percentage of Wood's Seeds, completely and correctly tagged as required by law during 1928 was 91.38%, whereas the average of 30 dealers supplying seeds in the State was only 69.65%. Wood's Seeds headed the list in 1928.

1929

For this year 118 samples were tested, of which 94.92% were correctly tagged, and stood highest of all dealers having over 40 samples tested during this period. Only three dealers topped this percentage, each of which had very few samples tested in comparison to the above.

The above statistics from Virginia State Department of Agriculture official records.

BETTER SEEDS—BETTER CROPS

Wood's Eureka Ensilage Corn, a superior strain, raised on the fertile lowlands of James River.

Wood's Heavy Yielding Ensilage Corns

For Largest Combined Production of Silage and Grain.
Known Throughout the World for Their Dependability.

"Grow more of better quality on less acreage." This is the main object of all successful farmers. Intensive farming and high yielding crops is the real solution in making farming profitable. Dairymen from all sections of the country are praising the wonderful results obtained from Wood's Virginia Grown Ensilage Corns. Mr. Gamble, of Phoenix, Maryland, writes that Wood's Pamunkey Ensilage Corn produced on 12 acres sufficient silage to fill his silo, whereas with his local grown corn it required 35 acres. We are continually receiving similar letters from dairymen and farmers throughout the country, telling of the enormous ensilage produced from our high yielding ensilage strains.

Wood's Virginia Grown Ensilage Corns are grown on the fertile soils of the James River and Rappahannock Valleys, which sections are renowned for the production of silage corn. Like our field varieties, every bushel is carefully hand selected, nubbed, and is fully matured in the field before the crop is gathered, resulting in a vigorous growing corn of remarkable yielding qualities.

The outstanding varieties of our Virginia Ensilage Corns are Wood's Pamunkey Ensilage, Eureka and Wood's Virginia Ensilage. These are universally grown. Other varieties favored in certain localities are Blue Mountain, Cocke's Prolific and Brandon Red Cob.

Of the yellow varieties Wood's Virginia Pride is an early strain and a heavy fodder producing variety. Wood's Shenandoah Yellow Ensilage is the earliest of all of our ensilage corns, particularly adapted for short growing seasons.

Grow Soja Beans for Hay and Seed Production

No Other Crop This Year Offers the Advantages as a Cash Crop

Soja Beans, both for seed and grinding purposes are increasing in demand throughout the country. The anticipated increase in tariff on Soja Beans and the by-products produced from same, will materially help in maintaining good profitable prices for the product of this crop. In view of the overproduction of both cotton and wheat, farmers should consider increasing their acreage in Soja Beans, and reducing the acreage of those crops which from present indications will not be as profitable as Soja Beans.

VIRGINIA SOJA BEANS—This is decidedly the most popular and profitable Soy Bean to grow in Virginia, western North Carolina and States west of Virginia, for both hay and seed production. Virginia Soja Beans are always salable at good prices, owing to widespread demand over a large section of the country. The Wilson Early Black is similar in growth and maturity, and a great favorite as a hay bean in West Virginia and Northern States.

LAREDO SOJA BEANS—A bean of outstanding worth, particularly for making hay. Produces slender branches with leafy growth, and ranks among the largest yielding hay varieties of the Soy Bean family.

MAMMOTH YELLOW SOJA BEANS—Probably the most extensively grown Soja Bean on the market. Makes enormous yields of hay, and an abundant seed producer. The Mammoth Yellow is used to a great extent for grinding purposes in the Coastal sections of Virginia and the Carolinas.

TOKIO SOJA BEANS—The following letter speaks well for this variety:

"The item your 1930 Catalog carries on Tokio beans is not quite strong enough. I operate a bean harvester for the public, and I can truthfully say with the many beans I harvested the past season that the Tokio bean yields more per acre than any other bean I have found. My section has just simply gone wild over this bean. The acreage in my section will be more than doubled this coming season, and I am sure every farmer that plants these beans will see the value is so much greater than some of the beans that have been used heretofore, they will discontinue all for Tokio. While I think for a hay bean the Otootan, Laredo and Biloxi are better, but for hogging down or oil consumption I do not think you could better the Tokio."—ARTHUR NEIGHBORS, Johnston County, N. C.

A complete list of Soja Beans that we can offer are given on the following page. Full description given in our 1930 Catalog.

SOJA BEANS GROWN FOR HAY

Wood's Virginia Grown Seed Corn

EVERY BUSHEL NATURAL FIELD MATURED, OF STRONG VITALITY, TESTING WELL OVER 90% GERMINATION

Wood's Seed Corns are raised from Improved and Certified Strains; every ear is carefully hand selected, nubbed and graded. Only true to type, uniform size ears are used in our Selected Seed Corn, which is the reason for the many letters from growers everywhere telling of increased yields from our improved strains. T. W. Wood & Sons sell annually over 100,000 bushels of Seed Corn throughout the world, and the rapidly increasing volume of business is good evidence of the results obtained and the care which is used in supplying our trade.

In an effort to help our customers choose the best adaptable variety suitable for their own particular locality, we are listing below a condensed summary of suggested varieties:

VIRGINIA, NORTH AND SOUTH CAROLINA—Westerly and Northern Section: All the varieties listed in this Crop Special are admirably adapted.

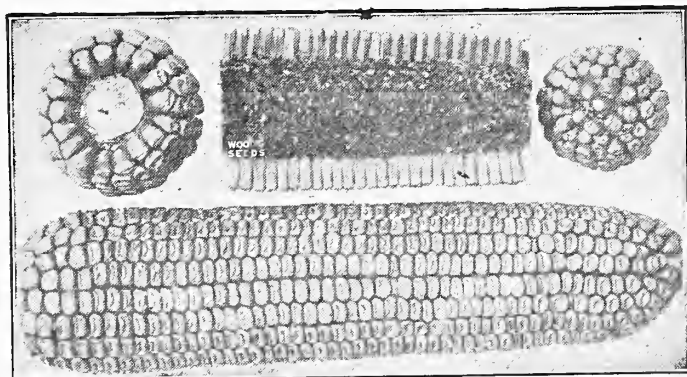

VIRGINIA, NORTH AND SOUTH CAROLINA—Coastal Section: Wood's Dixie, Southern Snowflake, Hickory King, Latham's Double, Hasting's Prolific, Biggs' Seven Ear and Improved Golden Dent.

SOUTH CAROLINA, GEORGIA AND FLORIDA—For General Planting: Hasting's Prolific, Latham's Double and Wood's Improved White Dent. For Early Feed and Roasting Ears: Early Harvest, Southern Snowflake and Improved Golden Dent.

VIRGINIA, NORTH CAROLINA, WEST VIRGINIA, TENNESSEE AND KENTUCKY—Mountain Section: Clarage Yellow Dent, Golden Queen, Reid's Yellow Dent and Early Harvest.

KENTUCKY, TENNESSEE AND WEST VIRGINIA—West of the Mountains: Woodburn White Dent, Boone County, Johnson County White Dent, Improved Golden Dent and Reid's Yellow Dent.

NORTHERN VIRGINIA, MARYLAND AND PENNSYLVANIA—Johnson County White, Boone County, Woodburn White Dent, Wood's Early Yellow Dent and Improved Golden Dent.

A typical reproduction of Reid's Yellow Dent Corn. The best corn to grow for show purposes.

ADVICE TO SEED CORN GROWERS

So many growers of Seed Corn are continuing to grow obsolete varieties of Seed Corn which cannot be sold at profitable prices. If you grow Seed Corn, produce those strains that are in constant demand and readily saleable in your particular section. The following varieties can be readily sold and bring a good premium for seed purposes: Improved Golden Dent, Reid's Yellow Dent, Improved White Dent, Biggs' Seven Ear, Hasting's Prolific and Latham's Double. These varieties are well known throughout the East and are always in heavy demand. Be sure and secure good foundation seed stock. Select one of the above varieties for your locality as suggested on this page and make the growing of Seed Corn profitable. Wood's Selected and Certified Strains of Seed will help you to increase your yield and make your corn crop profitable.

WOOD'S EARLY YIELDING COTTON SEEDS

Raised at the Top of the Belt—Bred for Earliness and Yield—Several Weeks Earlier Than Other Strains—Getting Ahead of the Boll Weevil.

These are the main reasons for the increasing popularity of our improved early strains of cotton seed. Leading cotton growers in practically every section of the South are rapidly beginning to see the many advantages of **WOOD'S COTTON SEEDS**. Generally speaking, those who have used our Northern grown seed have obtained twice the yield of their neighbors, and are making cotton a profitable crop to grow.

WOOD'S INGOLD COTTON

Highest Yields of Lint—Earliest of All—1 1/16 Inch Staple—Largest Bolls—39 Per Cent. Lint—1 1/3 Bales Per Acre.

Wood's Ingold Cotton yields more lint per acre than any other variety. This has been proven by actual tests and field results made by Experiment Stations and farmers in many States. There is no variety that matures earlier than Wood's Ingold, maturing with Early King. It consistently turns out 39 per cent of lint, producing a good quality staple, 1 1/16 inches in length, which brings the very top market price. It is a large boll cotton with small seed, making a larger boll than the Mexican Big Boll. Ingold is a very heavy fruiting cotton, some plants having as many as 90 bolls. Grows very upright and compact, with thin foliage that allows the sunlight to penetrate, killing the boll weevil larvae and reducing disease. It is easy to pick, but does not blow out.

COKERS—CLEVELAND No. 5

(An Improved Strain of Cleveland Big Boll)

1 1/16 Inch Staple—Recommended by the North Carolina Experiment Station.

Our strain of Cokers-Cleveland No. 5 is raised for us under the supervision of the North Carolina Experiment Station, and is recommended by them to cotton growers in that State. It is an early maturing strain, high yielding and has 1 1/16 inch staple and 39 per cent turn out of lint.

We can also supply the best available strains of Trice Cotton, Improved Early King and Mexican Big Boll. Full description of which will be found in our 1930 Catalog.

An individual plant of Wood's Ingold Cotton grown by W. D. Holland, Harnett County, N. C. Mr. Holland is an enthusiastic booster of this cotton, and is now planting his entire crop in Wood's Ingold.

WOOD'S CROP SPECIAL

Wood's High-Grade Garden Seeds

Our Guarantee:

Wood's Seeds are thoroughly re-cleaned, tested and of the highest quality. We guarantee them to be as represented in purity, germination and origin up to the full amount of the purchase price. Owing to many factors over which we have no control, such as weather, soil and seeding conditions, we cannot guarantee a crop.

Varieties listed here we suggest for the home garden, and most of these are recommended by V. P. I. Extension Service Blacksburg, Va. Our 1930 Spring Catalog contains a complete list of all varieties. Prices quoted include postage.
